Research Institute of Educational Development, Tokai University (RIED) holds the training workshop of the teacher of junior high school & Senior High School attached to the university. The training workshop contains to learn a method of the teaching materials development using imminent materials. The lecturer introduce experiment development examples and explain how to develop them. Teachers go to the 100-yen shop with the lecturer afterwards and purchase materials. They develop some experiments with the materials.

I introduce some experiments that I developed newly.

(1) The experiment of moisture absorption fever fiber

(2) Move the clock without any battery

(3) The sound when iron is magnetized
