LADY CATS (LADY Creators of Activities for Teaching Science) is an organization of science teachers. Our group includes a lot of female teachers. We have demonstrate “Simple and beautiful experiments” since ICPE2005. We aim to encourage both students and teachers who are not interested in physics. Our concepts of experiments are follows: the “simple” experiments which the teachers in the world can utilize by lesson easily, the “beautiful” experiments that children get interested, and the “essential” experiments which can demonstrate the principles of physics. We also demonstrate several educational experiments of our group.
